

Call Control Server (CCS)

Comverse ONE

Lesson Objectives

By the end of this lesson you will be able to:

- List the Call Control Server (CCS) functionalities in the Comverse ONE IVR service
- List the CCS structure and connectivity

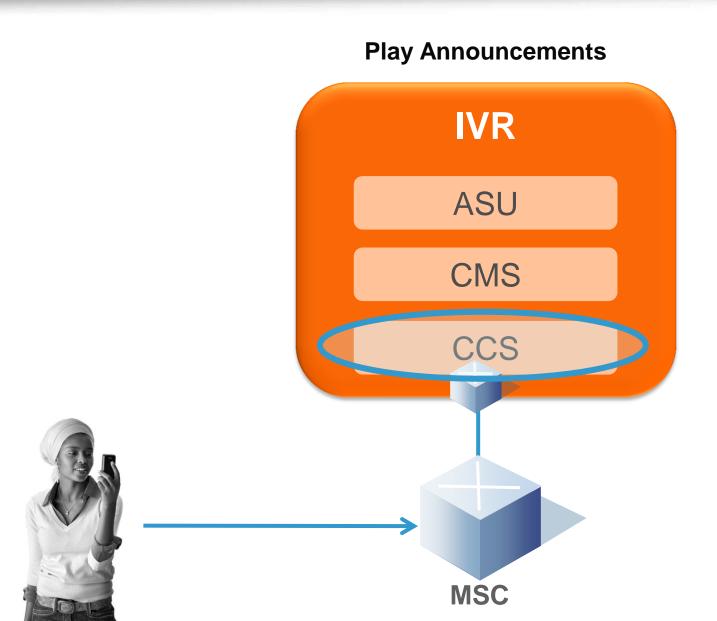

Agenda

CCS Functionalities

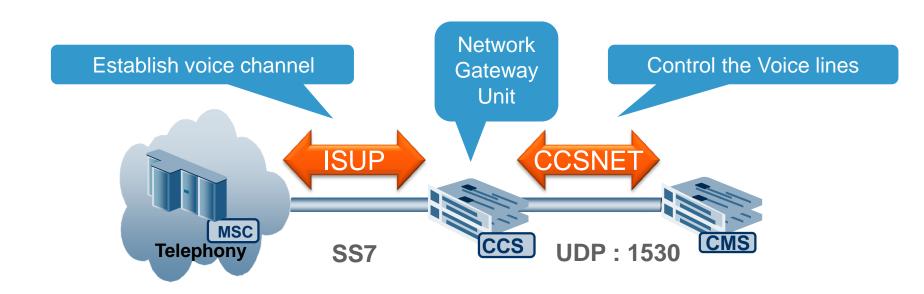

CCS – Structure and Connectivity

CCS Part of Comverse ONE IVR System

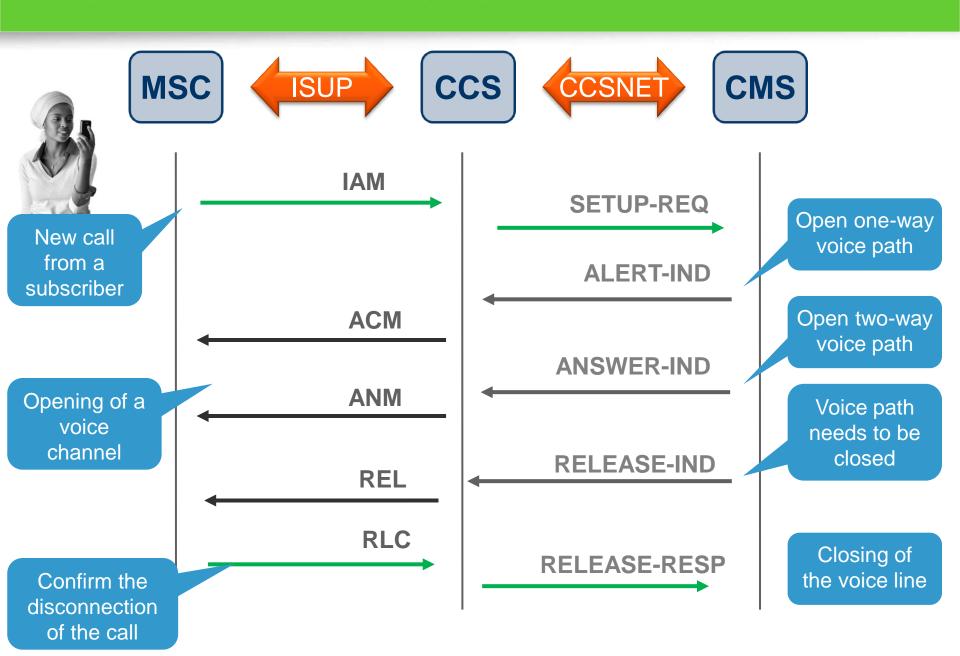

CCS Functionalities

- 4
- Network gateway unit to the Comverse One IVR service
- Converts SS7 into internal CCS CMS language

ISUP Translated to CCSNET

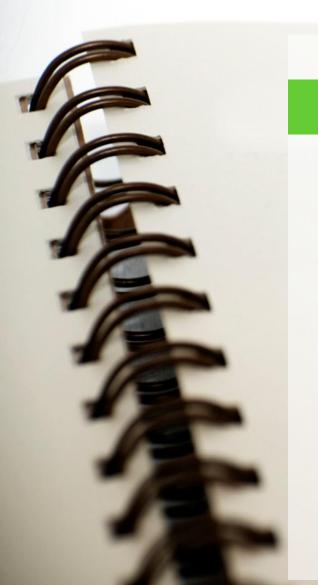

Review Question

Which of the following statements about the CCS is **NOT** true?

- 1. Network gateway unit to the Comverse ONE IVR service
- 2. Responsible for playing announcements
- 3. Converts SS7 into internal CCS CMS language
- 4. Acts as a Signaling Switching Point (SSP)

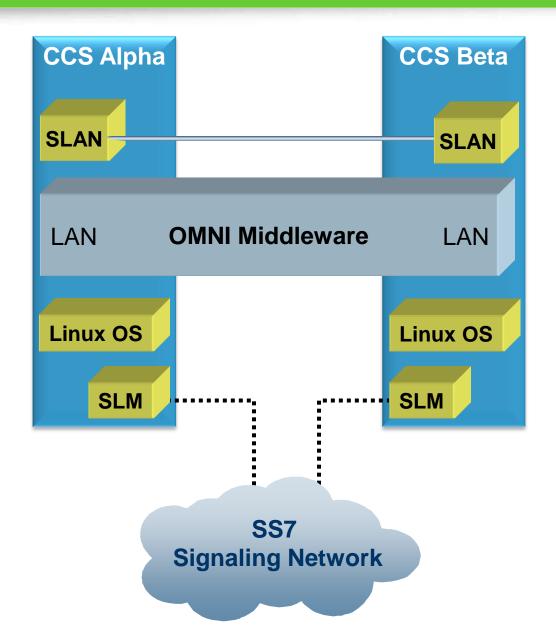

Agenda

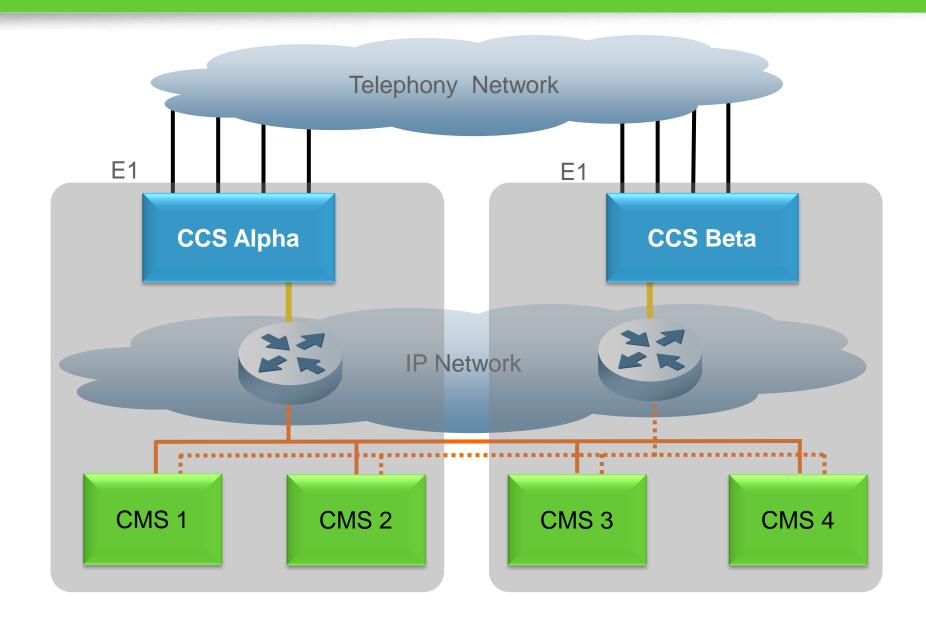

CCS Functionalities

CCS – Structure and Connectivity

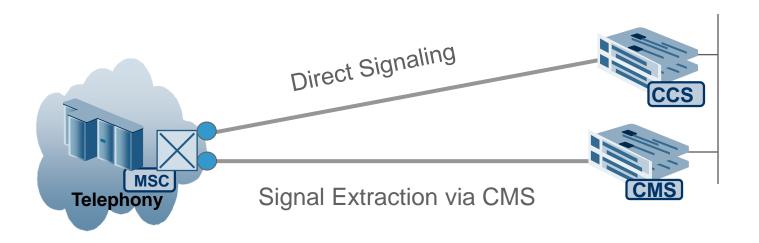

Structure and Connectivity

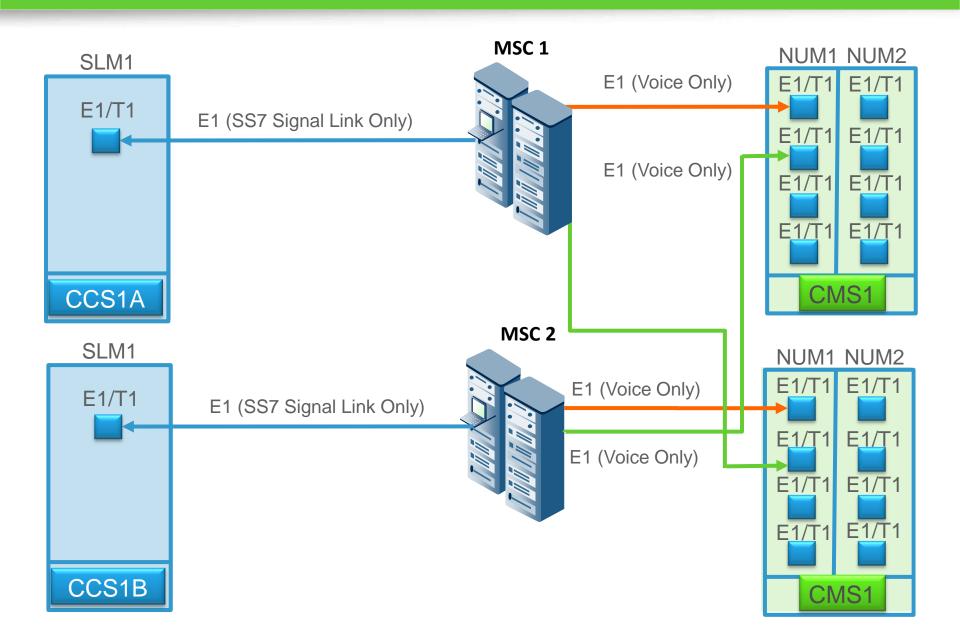

CCS Redundancy

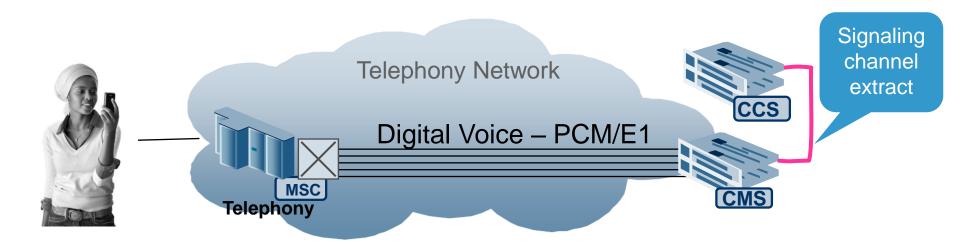

Physical Connections to the CCS

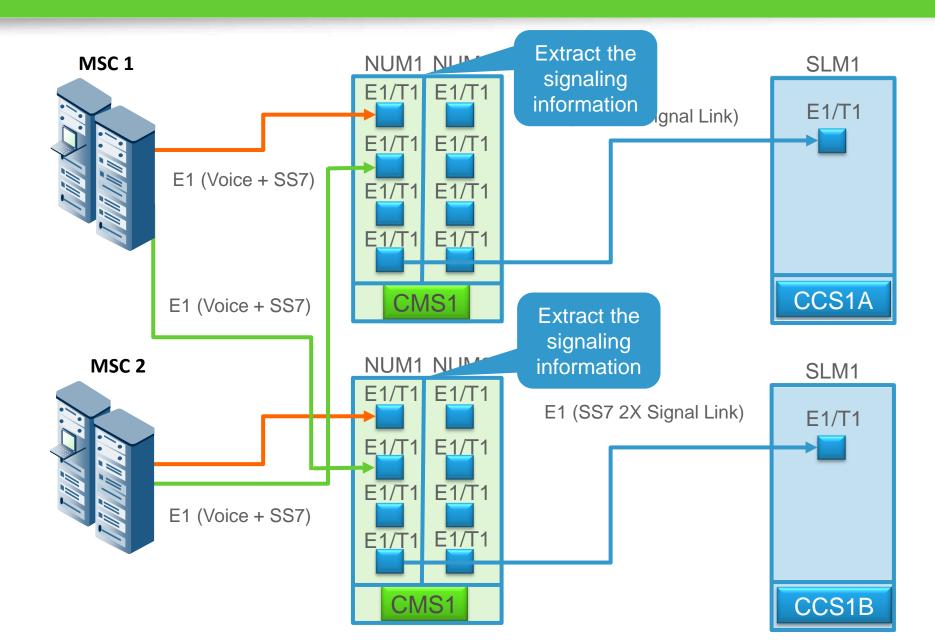

Direct Signaling

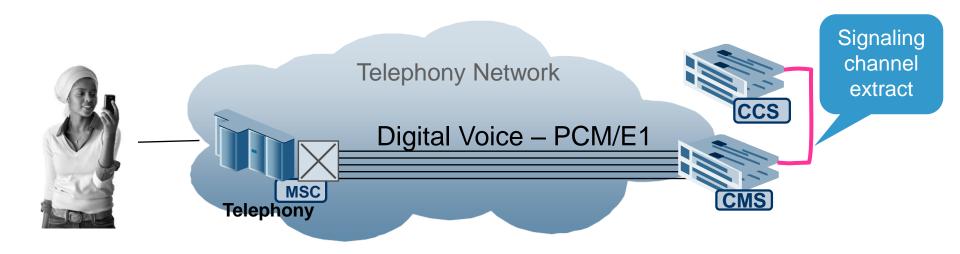

Signaling Extract

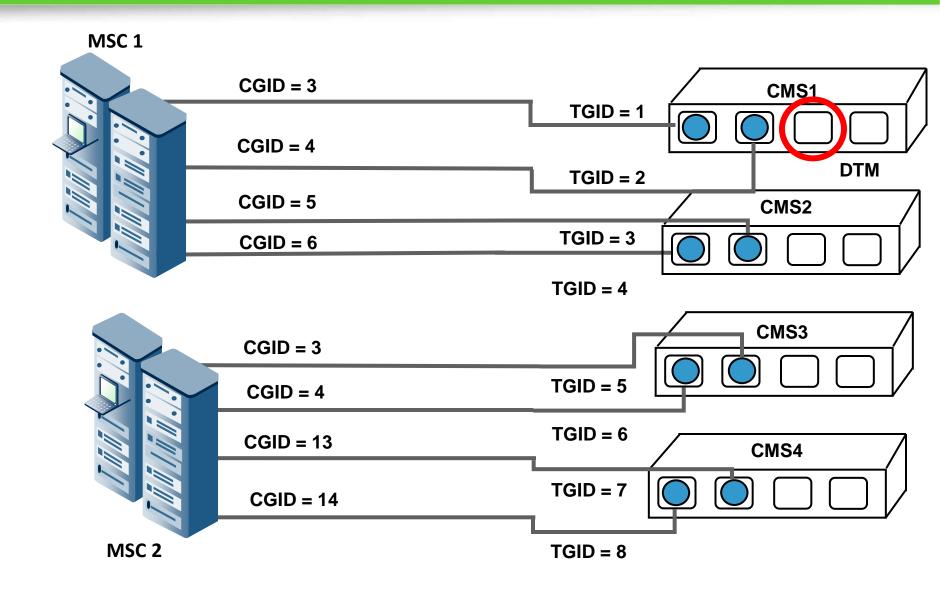

Signal Extraction via CMS

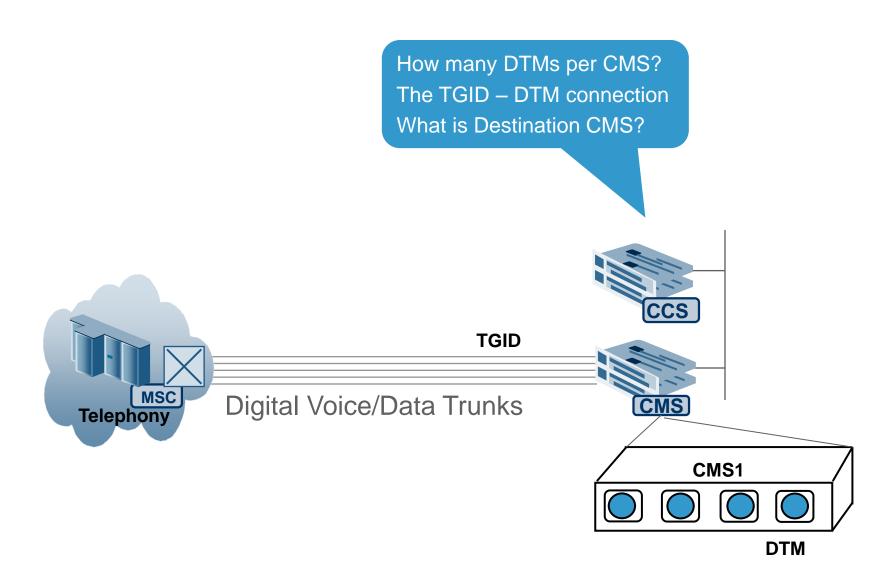

Basic Communication Terms (1)

Basic Communication Terms (2)

Basic Communication Terms (3)

Review Question

Please answer the following questions

- 1. Which of the following statements about Direct Signaling is **NOT** true:
 - Separate E1 connection between the MSC and the CCS for SS7 signal link.
 - b. Separate E1 connection between the MSC and the CMS that carries voice
- 2. Which of the following statements about Signal Extraction via CMS is **NOT** true:
 - The E1s between the MSC and the CMSs carry both voice and SS7 signaling information
 - b. Commonly used for the implementation of the physical connection to the CCS
 - c. Separate E1 connected between the MSC and the CCS for SS7 signal link

Summary

This lesson has covered:

- The CCS functionalities
- The CCS structure and connectivity
